

# Unlock Learning at Scale with a Multimodal Digital Academy

**Powered by Engageli**

## Multimodal offerings enhance comprehension by supporting diverse learning styles.

Learning happens in real time, at your own pace, in groups, and alone - Engageli is the only platform designed for it all. With Engageli, learners experience active, collaborative instruction in real time and revisit materials on their own schedule in asynchronous playback rooms. This flexibility reinforces understanding through spaced repetition and adaptive pacing.

In the live classroom, instructors can implement active learning strategies using patented virtual tables, where learners collaborate in small groups without losing access to full-class instruction. This table-based architecture replicates the energy of in-person group work, but without the chaos of traditional breakout rooms. Instructors maintain full visibility into engagement at each table, with the ability to join, monitor, or facilitate group discussions.

## Corporations benefit significantly from powering their own digital learning academies due to their flexibility and scalability.

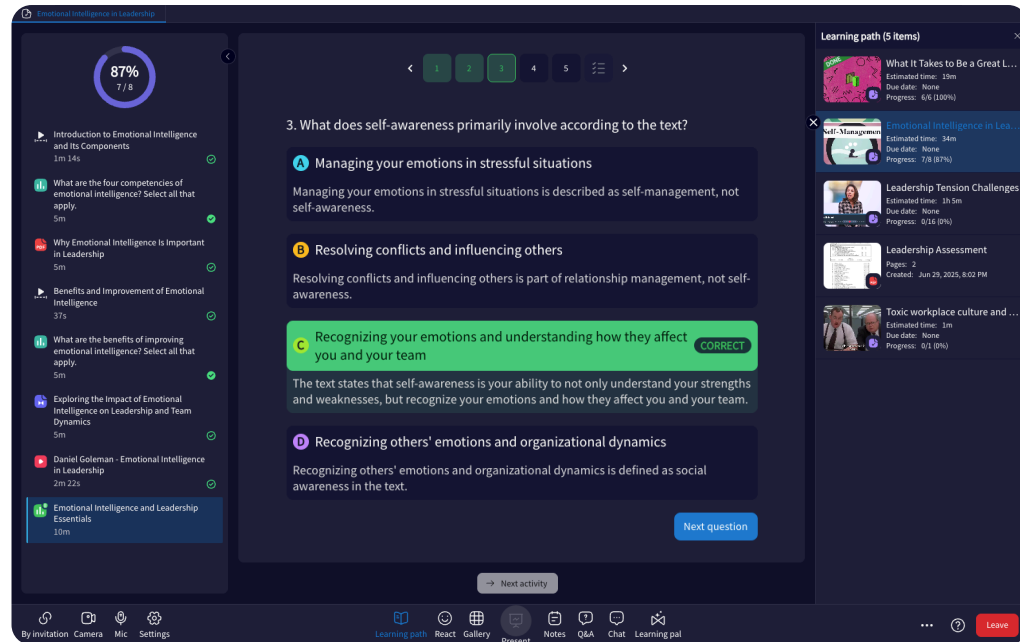

A branded digital academy on Engageli helps create a unified learning experience that reflects your organization's identity. From logos and colors to localized pods and custom content sequences, companies can design and deliver learning paths that scale globally and yet still feel personal - while also strengthening organizational loyalty and reinforcing brand recognition across every touchpoint.

This model supports continuous upskilling across the employee lifecycle. For example, new hires may begin in foundational pods, while more tenured employees progress through advanced modules or leadership training - all accessible from a single platform. Employees that complete different years with the corporation can be upskilled for their progression to the next level using Engageli room pods.

## Asynchronous learning powered by AI, coupled with live role play for skill development, is essential for employee success leading.

Engageli Studio makes it easy to quickly create digital academy pods using AI. Teams can turn recorded meetings, trainings, or product demos into fully interactive modules in just hours or less. Engageli's AI segments videos into chapters and auto-generates comprehension checks and activities. Live role play takes place at virtual tables or through Prepi, Engageli's AI-powered sales and communication simulator.

In every modality, employees practice real scenarios, receive instant feedback, and build fluency through structured peer learning. The result: learners in Engageli's active environment see **54% higher knowledge retention and 16x more engagement**, delivering measurable ROI.

## Engageli's comprehensive analytics give learning leaders a true picture of how invested and prepared their workforce is.

**Knowledge scores:** based on quizzes, polls, and question responses, these show concept mastery and progress.

**Engagement scores:** track participation by table and individual, including speaking time, camera on time, reaction use, poll responses, note-taking, and chat contributions.

**Playback insights:** see who's reviewing materials, when and where learners are re-engaging: critical for understanding knowledge gaps and retention.

**AI-generated summaries and sentiment analysis:** help instructors understand not just what was covered, but how learners felt about the experience.

## See it in action

Build a digital academy that's personalized, scalable, and outcome-driven. With Engageli, you can combine the best of live and self-paced training, all under one classroom link.
