

The AI-Powered Virtual Classroom Built for K-12

Engageli classrooms give K-12 school districts one platform where every student, live or recorded, camera on or off, stays visible, engaged, and accounted for.

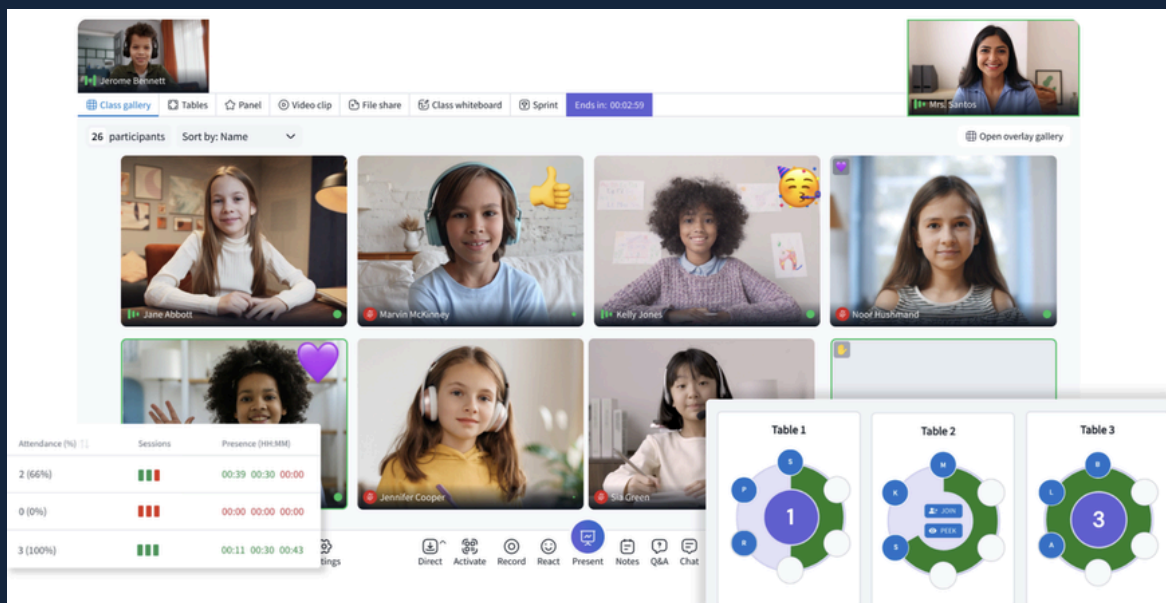

The Challenge

K-12 school administrators are required to prove evidence of student attendance and engagement they cannot actually observe, despite state compliance and seat-based funding depending directly on these metrics. Since generic video-conferencing tools were built for meetings and are not classrooms, school districts end up stitching together plug-ins and standalone apps to approximate authentic teaching and learning. The result is thin attendance records, disengaged students, and regulatory reporting rooted in guesswork.

The Engageli Approach

Engageli was purpose-built for teaching and learning rather than adapted from a meeting tool. The platform captures engagement data, keeps students active in small groups at tables without ever leaving the classroom, and gives school districts the attendance and participation records needed for state seat-funding compliance.

Tables view: small-group collaboration

What School Districts Get

01 **Tables, Not Breakout Rooms**

Persistent small-group seating keeps students visible and connected. Teachers can monitor, guide, or join any table instantly, and every student's speak time is tracked automatically.

02 **Real-Time Engagement Analytics**

Engagement data gives teachers and administrators clear metrics on participation and comprehension. The same data supports the attendance records districts need for state compliance and seat-funding.

03 **Classroom Management Controls**

Engageli provides education-specific controls that help teachers manage participation, maintain student safety, and keep students focused, controls that generic meeting tools were never built for.

04 **Unified Live and Asynchronous Learning**

The same classroom link works for live class and recorded playback. Students who miss class can still take quizzes, use whiteboards, and review AI-generated summaries in the Playback Room.

05 **Interactive Tools Built In**

Quizzes, polls, gamified sprints, and collaborative documents live inside the classroom. This lowers total cost of ownership and simplifies the district's technical stack.

06 **Integrations That Fit Existing Infrastructure**

Engageli integrates with Google Docs, Microsoft 365 documents and supports LTI, SSO, and API integrations, so it fits into the infrastructure school districts already run.

"One of our fifth-grade teachers was in Engageli with her students. They weren't doing their work, so she said, 'If you can't handle this privilege of collaboration in Engageli, I guess we're going to have to go back to video conferencing!' And the kids were not thrilled about that — they said, 'No, please don't make us go back!'"

Christine Bowlby, Principal — Salem-Keizer Public Schools

Built for the K-12 Experience

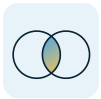

Peer to Peer Learning

With the transformation of online learning from a solo experience into a connected community, students are empowered to learn. Persistent peer groups, collaborative activities, and interactive tools give every student more opportunities to participate, contribute, and learn from classmates.

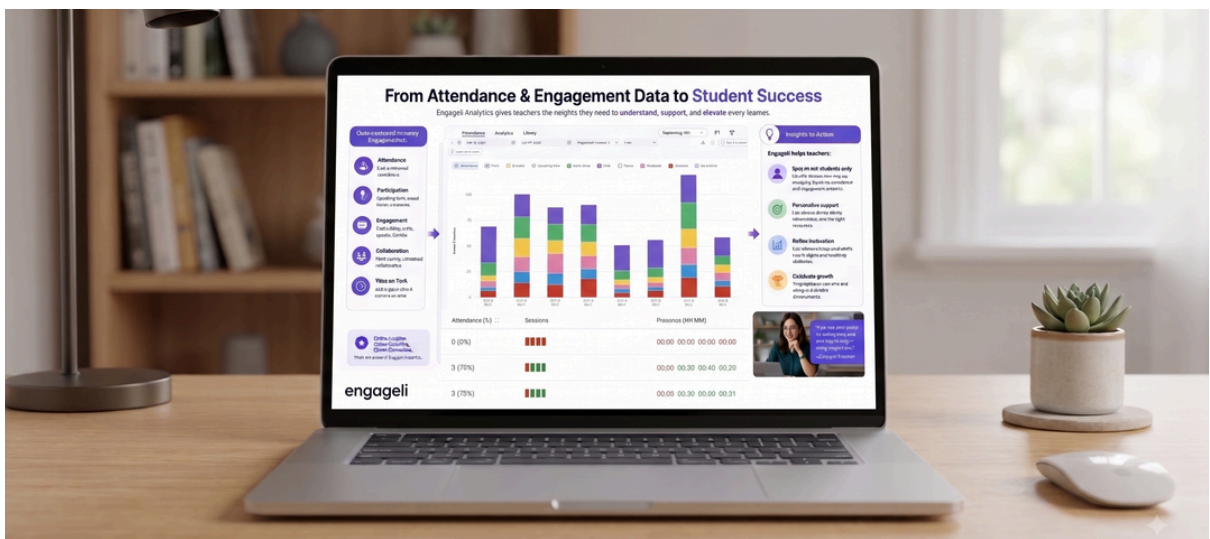

Game-Based Learning

Engageli brings game-based learning capabilities directly into the virtual classroom through interactive challenges, quizzes, team activities, and friendly competition that motivate students to stay engaged. Built-in analytics help teachers identify knowledge gaps, understand student progress, and focus support where it is needed most.

School Clubs and SEL Support

Interest-based clubs run inside Engageli and leverage the classroom tables, giving students enrichment and social-emotional learning beyond the core curriculum. Games and team challenges build community among students who may never share a physical hallway.
